Automated Panelboard (A-Panel)

PRIMARY FUNCTION

The A-Panel is a compact solution to your automated power needs.

HOW IT WORKS

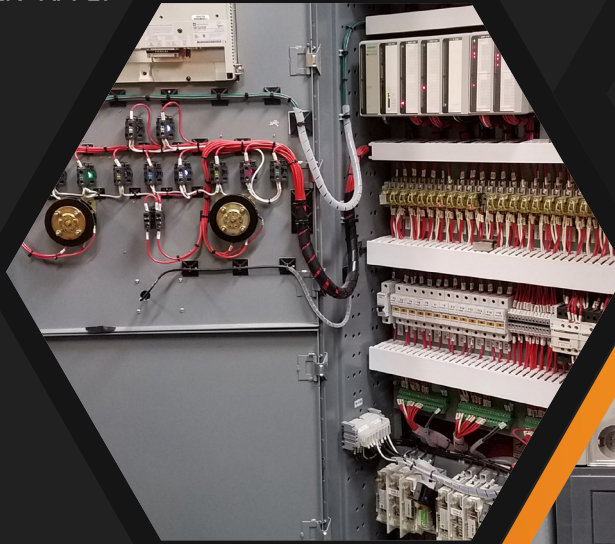

The I-Line is coupled with two standard **gutter enclosures** on either side. One gutter is used for the controls (low voltage) and the other is used for the power devices (high voltage).

The standard design allows for a utility and up to **three generators** to be brought on the common power bus (4 sources).

The common power bus can be **shared** with the plug on distribution breakers for all of your power distribution needs.

PRODUCT SPECIFICATIONS

Our A-Panels can be built with up to 1000A and four power sources, and utilizes the standard Square-D I-Line Panel.

KEY FEATURES OF THE A-PANEL

- Versatile Power Options
- Redundant Hardware & Software
- Low Hazard Controls
- Compact Design
- All-In-One Power, Controls, and Protection
