# Retrofit of Existing Control Equipment

## PRIMARY FUNCTION

To modify and adapt existing control equipment using parts developed or created after the time of original manufacture.

## VERSATILE

Dillengr can come to your facility and give you a custom quote for a PLC upgrade or control system retrofit of your...

- Switchboard
- Switchgear
- Panelboard Equipment

If you select an ATC, we will use the remote cabinet to ease the install as well as locate your ATC outside of your facility's ARC Flash boundaries.

## QUICK & EASY

Once onsite, our engineers and technicians install and fully test the equipment in one to two nights, depending on complexity. This minimizes and/or eliminates downtime and risk.

## FOR YOUR CONVENIENCE

Dillengr designed this method of executing retrofits for our customers' convenience and peace of mind. It is why they repeatedly come back to us for this.

## FULLY TESTED PRIOR TO SHIPMENT

At Dillengr, most of our Retro's are created in house, but ALL of our Retro's are fully tested prior to shipment or installation.
